CDPH ZIKA VIRUS UPDATE

EXECUTIVE SUMMARY

The Medical and Health Coordination Center (MHCC) continues to be activated in response to Zika virus disease. The California Department of Public Health (CDPH) and Emergency Medical Services Authority (EMSA) are currently the only Emergency Function 08 (EF 08) partners at the state level reporting on this activation.

The MHCC is coordinating with EF 08 partners, healthcare facilities and local health departments (LHDs) to ensure responses to inquiries are timely and accurate.

CDPH and EMSA Duty Officer Programs are monitoring Zika virus disease after hours and communicating with the Regional Disaster Medical and Health Coordination (RDMHC) and the Medical Health Operational Area Coordination (MHOAC) Programs throughout California.

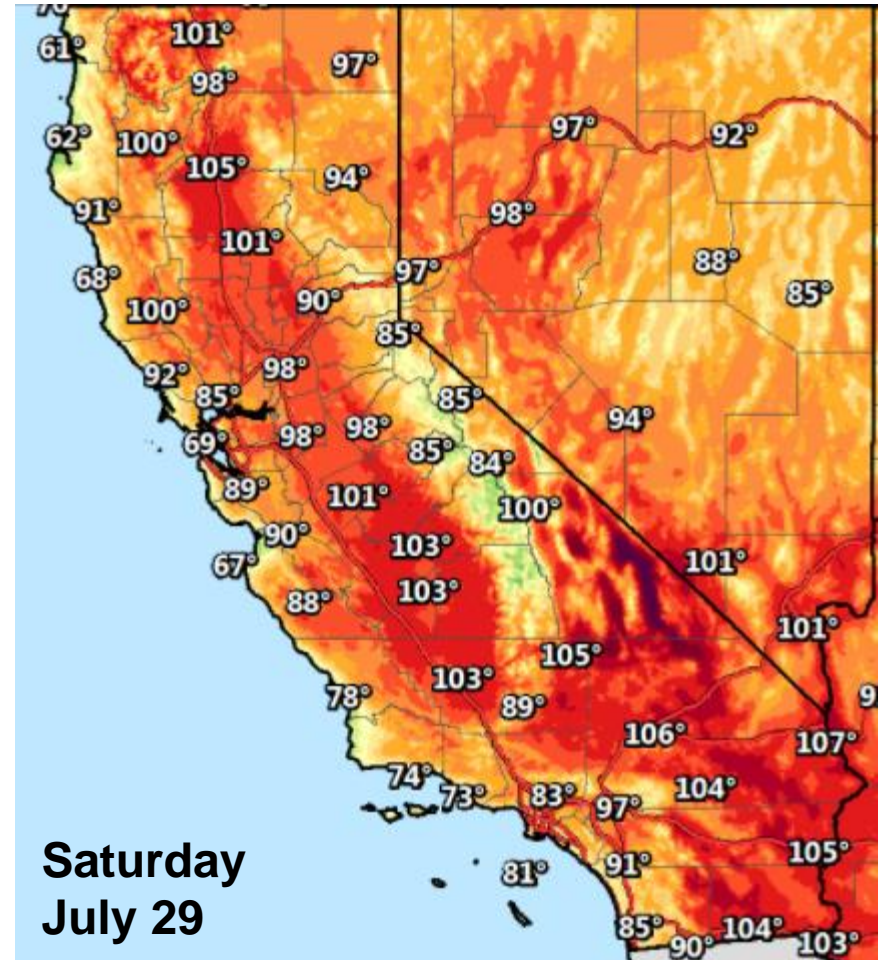

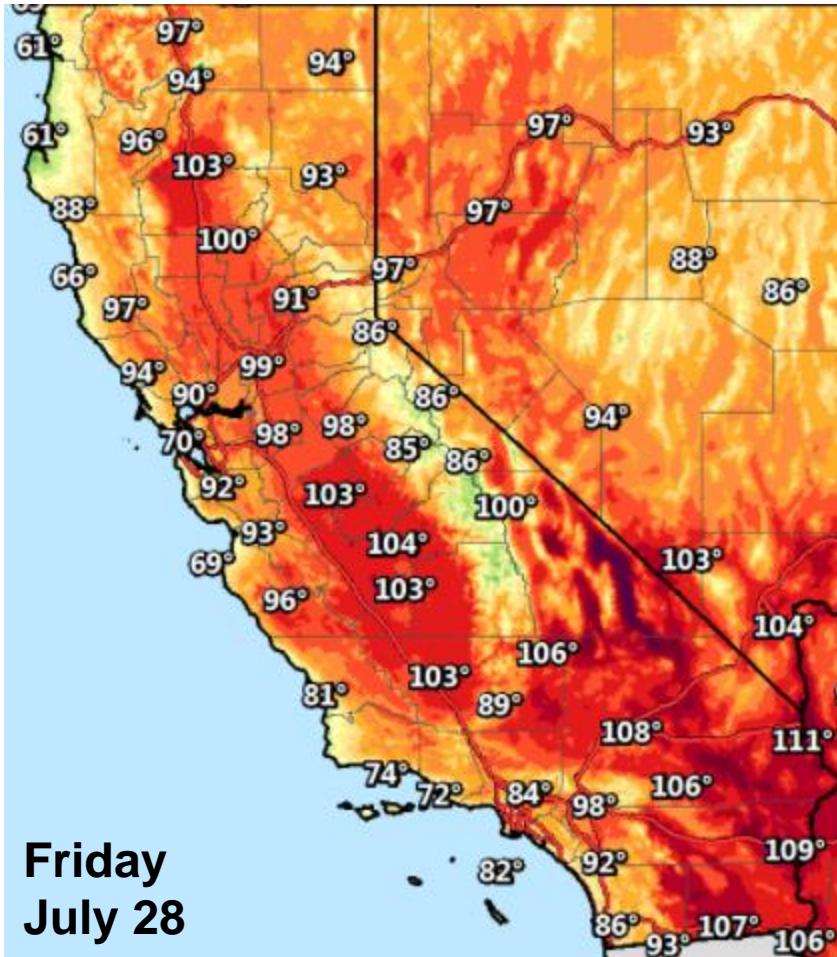

As of Friday, 07/21/17, there have been 575 travel-associated Zika virus infections in California. This number reflects an increase of 2 from the 573 cases reported on the last situation report dated 07/13/17. CDPH centers and programs continue to monitor Zika virus disease and provide information to the MHCC related to their specific activities on a weekly basis.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Hot temperatures through early next week

A high pressure ridge currently centered over the Southwest will migrate northwest toward Reno over the next few days. This will result in a warming trend with temperatures climbing a degree or two each day through next Tuesday or Wednesday. By then, high temperatures will climb into the 100-105 degree range across many lower elevations with the northern Sacramento Valley seeing readings close to 112. A minor amount of moisture will continue to stream into the eastern side of the forecast area which will allow isolated thunderstorms to develop each afternoon.

Today, the storms should be confined to the Lake Tahoe area, but over the weekend, the storms may reach the Sierra and the east side. The storms will be few in number, and thus, no high risk days are anticipated. Although there will be some moisture aloft, minimum (relative humidity) RH will drop into the 10-15% range over most mid-slope regions below 6,000 feet. The lowest RH the next few days may be in interior sections of Mendocino and Trinity Counties into western Siskiyou County where some single digit RH will be possible for 5-6 hours each afternoon. All winds will be light the next few days.

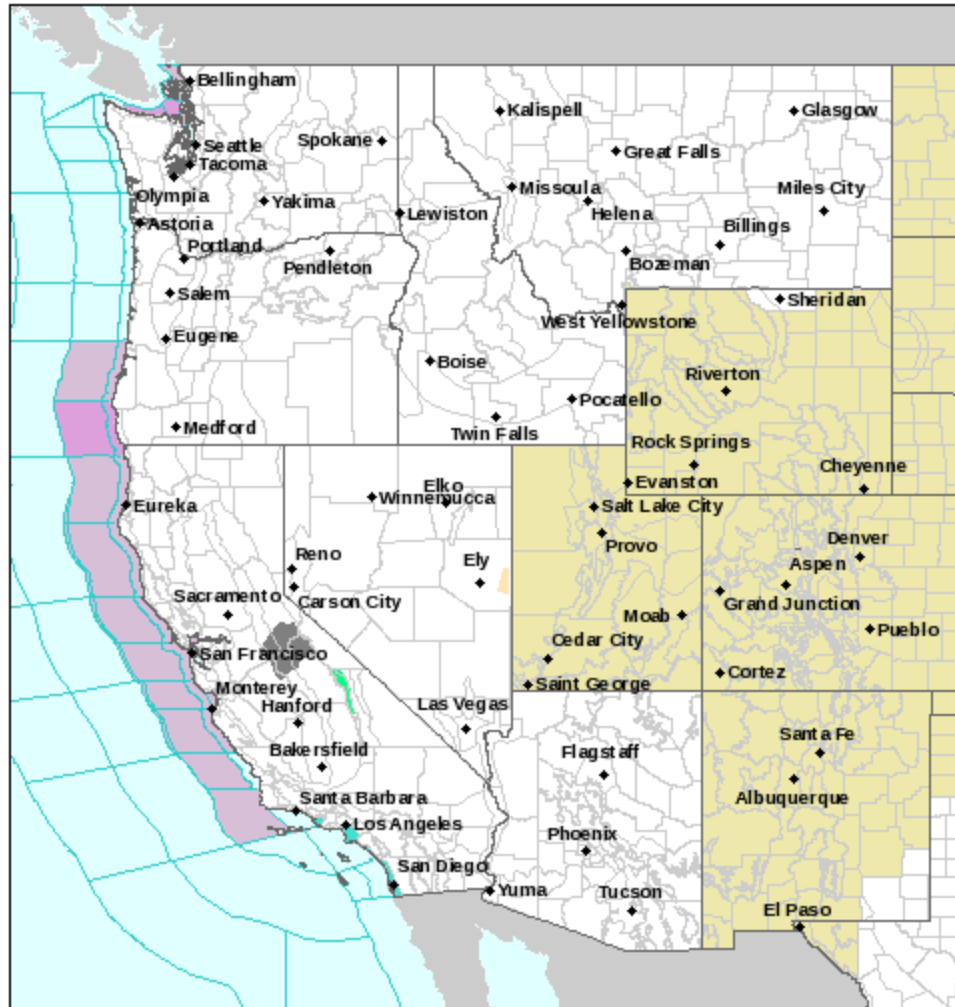

The weather will show little day-to-day change through Wednesday. Long range models indicate a trough may approach the area late next week, resulting in southwesterly flow and a return of stronger onshore flow and delta breezes. The chances of thunderstorms will likely end after next Wednesday and a slow cooling trend may ensue. There may be stronger winds and lower RH in alpine areas and elevations above 8,000 feet next Thursday into the following weekend.

SOUTHERN CALIFORNIA

Little change is expected in the weather during the next day or two with mostly clear skies. However, there will be isolated afternoon showers and thunderstorms over the Sierra both today and Saturday and isolated afternoon showers and thunderstorms over the San Bernardino and Cleveland National Forests Saturday. Maximum temperatures will be in the 80s to low 90s in the mountains, 90s to near 102 in the inland valleys, and near 112 across the lower and eastern deserts. Humidity values will drop into the teens away from the coast today and Saturday, but humidity values will begin to increase across the southern portions of the state by Sunday. Winds will be SW-NW 8 to 18 mph except 15-25 mph across the Antelope Valley and the Mojave Desert during the afternoon and evening hours. There will be various amounts of low clouds and fog along the coast with light to moderate sea breezes expected. Another surge of monsoon moisture is expected to invade the southern portions of the state by Sunday. This will result in higher humidity, slightly lower temperatures, more clouds, and a greater threat for afternoon wet thunderstorms across the mountains and deserts. Also, an easterly wave is forecast to move across Southern California Monday and Tuesday with the possibility for a few showers and thunderstorms to reach the coastal and valley areas by then. By the middle to end of next week, strong high pressure will build over California with temperatures rising to above normal levels. Isolated showers and thunderstorms are expected to continue over the mountains and deserts for much of next week.
